Feb - Apr 2019

## NCAA Basketball Men's

## Tournament

- At the end of the United States NCAA Men's basketball season there is a single elimination tournament to declare the National Champion
- Some teams are included because they are the champions of their conference, i.e. automatics bids
- Non-conference winning teams are included by a selection committee which attempts to fill out the open tournament spots by picking the remaining best teams in the United States to participate
- The teams are ranked, essentially, from 1-64 by the committee and placed in 4 regions (East, West, South, and Midwest) where each region has 16 -teams

## The Regions

- Because there are 4 regions, there are 4 teams with a top, i.e. number 1 seed, and those teams play the 4 worst ranked teams, i.e. the number 16 seeds. This separation is intended so that the 4 top teams by ranking cannot play each other until the semifinal of the tournament (provided they win all their games against worst ranked teams)
- In the first round, the \#2 seed plays the \#15, the \#3 seed plays the \#14, etc.
- The teams are ranked 1-64, where 1 is the best and 64 is the worst. The overall best 4 teams in the tournament get a $\# 1$ regional seed and are placed in separate regions, the 5-8 best teams in the 64-team field get a \#2 region seed and are placed in separate regions, etc.
- In each region the \#1 and \#2 seeds are placed at opposite sides of the bracket, so that they play the maximum amount of lower ranked teams before potentially a game between them

## 2016 Full Bracket - 4 Regions

## 2016 Full Bracket (Example)

Top 4 teams in the nation (according to the selection committee) are given a \#1 regional seed (red) and placed in separate regions. The 5-8 best teams (according to the selection committee) are given a \#2 regional seed (blue) and placed in separate regions.

## $\underline{2016}$ - A Single Region

- In each region the \#1 seed plays the \#16 seed (FYI in 136 games of \#16 versus \#1, the \#16 seeded team won only once). The game between the \#8 and \#9 seeds are generally rather balanced, with a the \#8 team winning ~50\% of the games.
- After the "Round of 64" the winning teams play each other according to the bracket format, suggested by the cascading lines in the bracket on the left.

| Round of 64 March 17-18 | Round of 32 <br> March 19-20 | Sweet 16 | Elite 8 | Final |
| :---: | :---: | :---: | :---: | :---: |
| 1 Kansas |  |  |  |  |
| 16 Austin Peay |  |  |  |  |
| 8 Colorado |  |  |  |  |
| 9 UConn |  |  |  |  |
| 5 Maryland |  |  |  |  |
| 12 South Dak... |  |  |  |  |
| 4 Cal |  | SOUTH |  |  |
| 13 Hawaii |  |  |  |  |
| 6 Arizona |  |  |  |  |
| 11 Wichita St. |  |  |  |  |
| 3 Miami |  |  |  |  |
| 14 Buffalo |  |  |  |  |
| 7 lowa |  |  |  |  |
| 10 Temple |  |  |  |  |
| 2 Villanova |  |  |  |  |
| 15 UNC Ashe... |  |  |  |  |

## $\underline{2016}$ - Match-ups

- The selection committee does not take possible match-ups into account, e.g. it does not try avoid or enforce that Colorado plays UConn. It ranks the teams from 1-64 and places them in the separate regions.
- Because the selection committee does not take into account team match-ups there are exploitable margins where the lower seeded team may actually be better/worse matched against the higher seed
- E.g. a better seeded team that solely relies on 3-point shooting to win may encounter a worse seeded team that has the best 3-point defense in the nation

## The "Task"

- Before the beginning of the first game of the 1st round on March 21, 2019 submit one and only one prediction of:
- How many teams will win by $\leq 4$ points, AND
- How many teams will win by $\geq 34$ points
- This is only for the 32 games in the first round
- Don't have to pick which teams won, only the total number $\leq 4$ and $\geq 34$
- $+1 \%$ extra credit will be applied to a full course grade (on a scale from $1-100 \%$ ) if you are within $\pm 2$ of the actual number of teams which win by $\leq 4$ points AND $\pm 1$ for teams $\geq 34$ points
- Additionally, +1\% extra credit will be applied for successfully picking one and only one upset (which is where a worse ranked team wins).
- The winning team must have a seed $\geq 11$
- This is only for the 32 games in the first round
- Submit the name of the team you nominate for the upset win
- Email predictions to Jason (koskinen@nbi.ku.dk)

## Some Comments

- No justification for your selections are necessary, but you may dramatically improve your chances if you can find some statistical metric for estimating the difference of the final scores, and which higher seeded team has a chance for an upset win
- This is EXTRA CREDIT and can only help your grade
- The 2019 final selection bracket will be available many places online on March 18, 2019 at ~01:00 CET
